

KICKSTARTER FUNDING

A look into which project profile characteristics drive
crowd-sourced funding

October 1, 2021

Evelyn Johnson

KICKSTARTER STATS

Launched in

**April 28,
2009**

**\$6.1
billion**

has been
pledged.

**209,009
projects**

have reached
their funding
goal.

THE MISADVENTURES OF AWKWARD BLACK GIRL

Funding Goal	\$30,000
Funding	\$56,259
Backers	1,960

FLEABAG

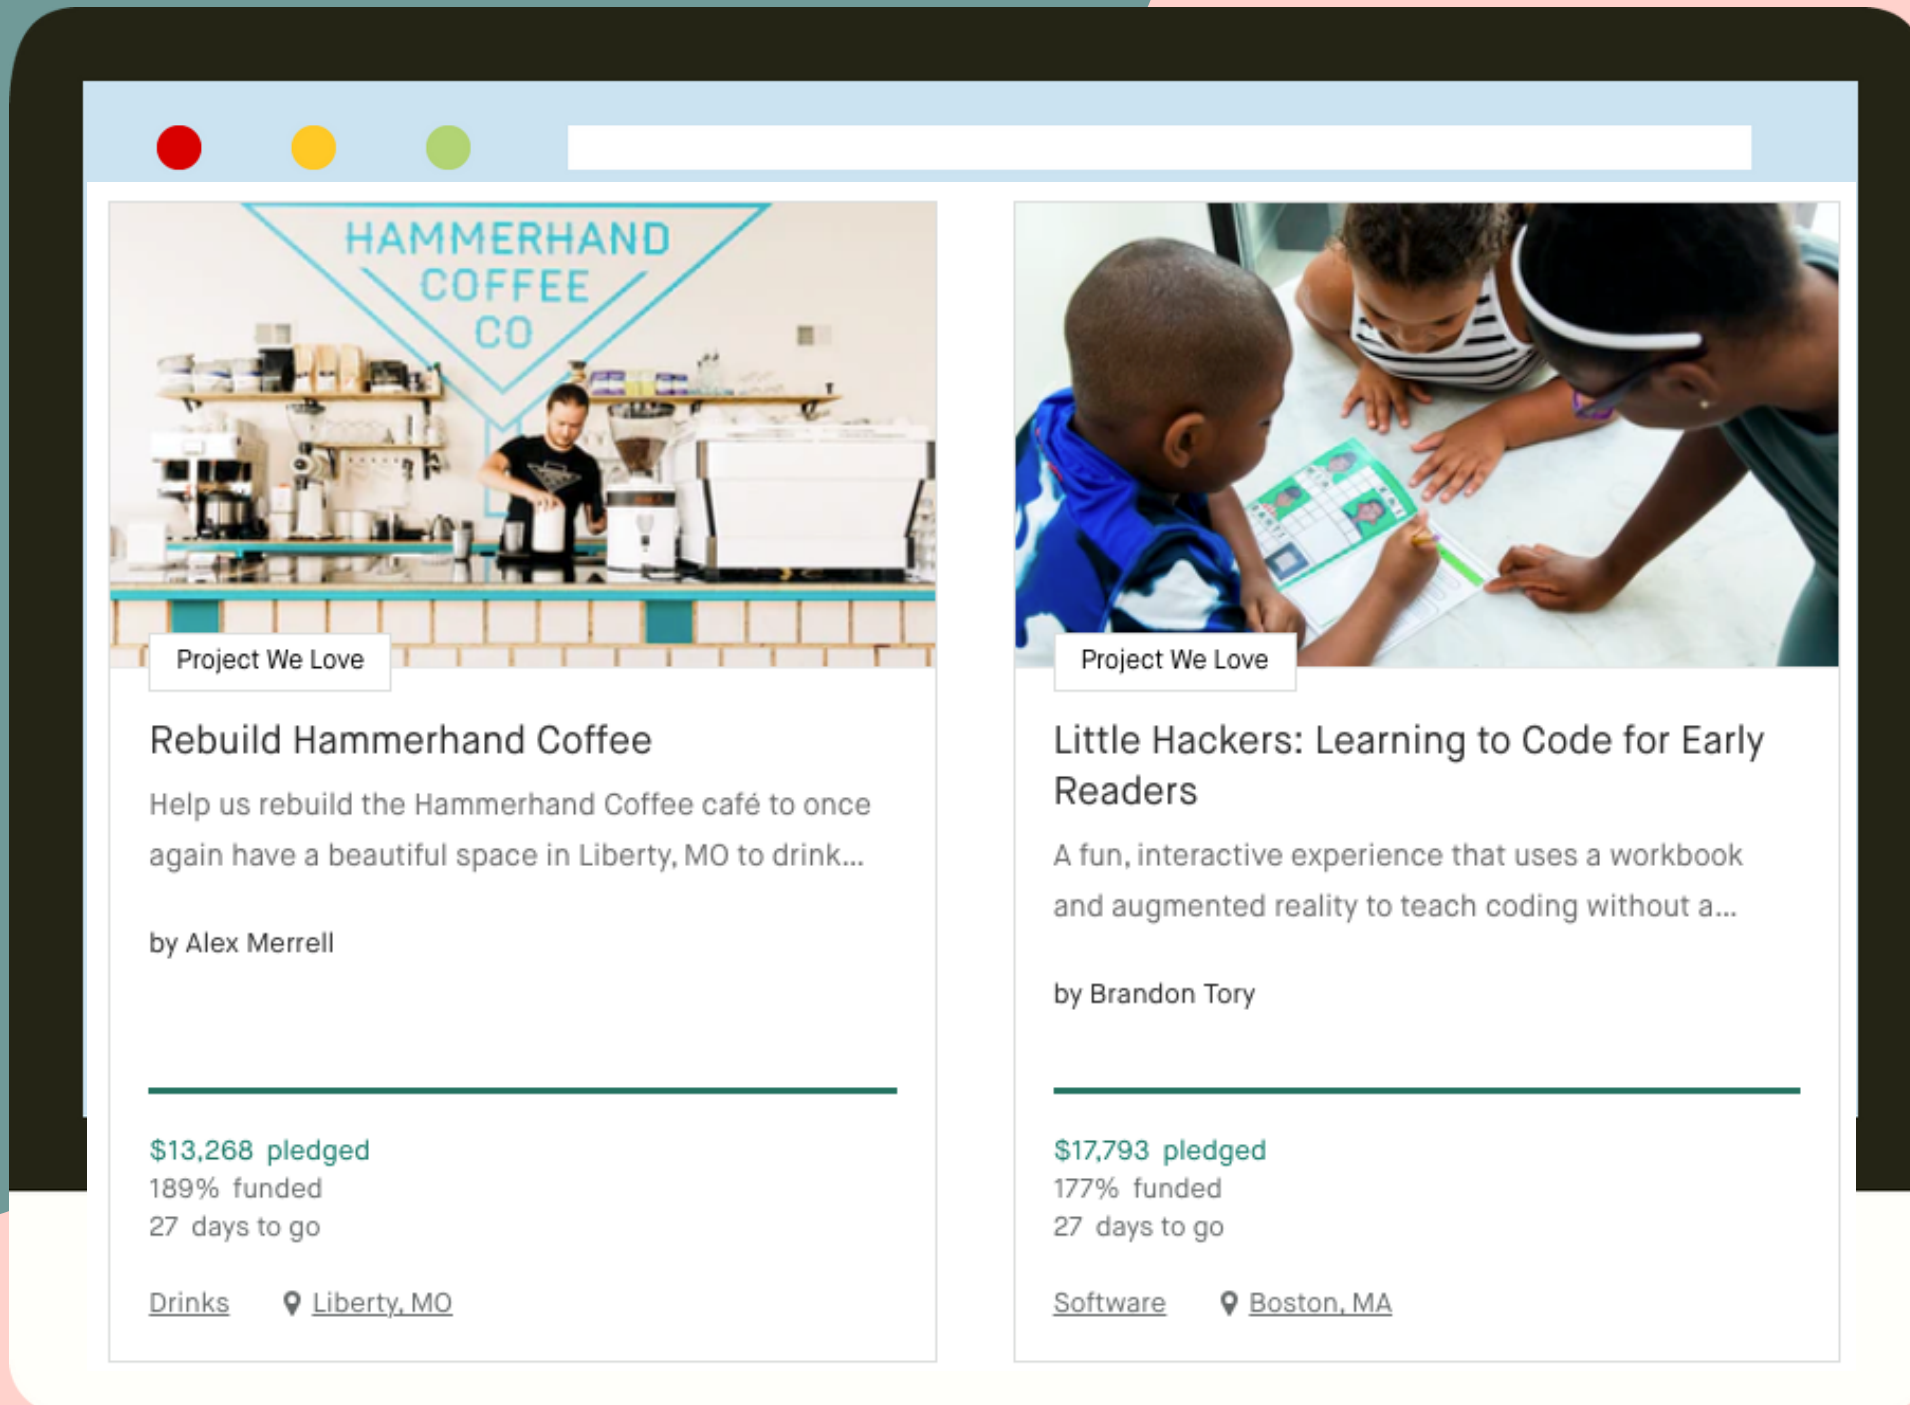

Funding Goal	£3,000
Funding	£3,955
Backers	54

DATA: PROJECT PROFILES

- ☀ Successful Projects
- ☀ Projects in US
- ☀ Sorted by end-date

Out of 147,028, I web-scraped the first 1,080 using Beautiful Soup and Selenium.

MODELING FRAMEWORK

Funding

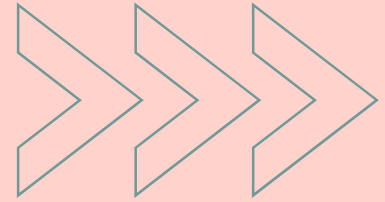

FEATURES:

1. **Project We Love Tag**
2. **Number of Backers**
3. **Monetary Goal**
4. **Number of Pledge-Reward Options**
5. **Number of Backers for Lowest Pledge**
6. **Number of Backers for Highest Pledge**
7. **Length of Funding Period**
8. **Video Present**
9. **Location**
10. **Category**

DATA CLEANING & OUTLIER ADJUSTMENT

Transformed categorical data,
location and category, into
dummy variables, as follows:

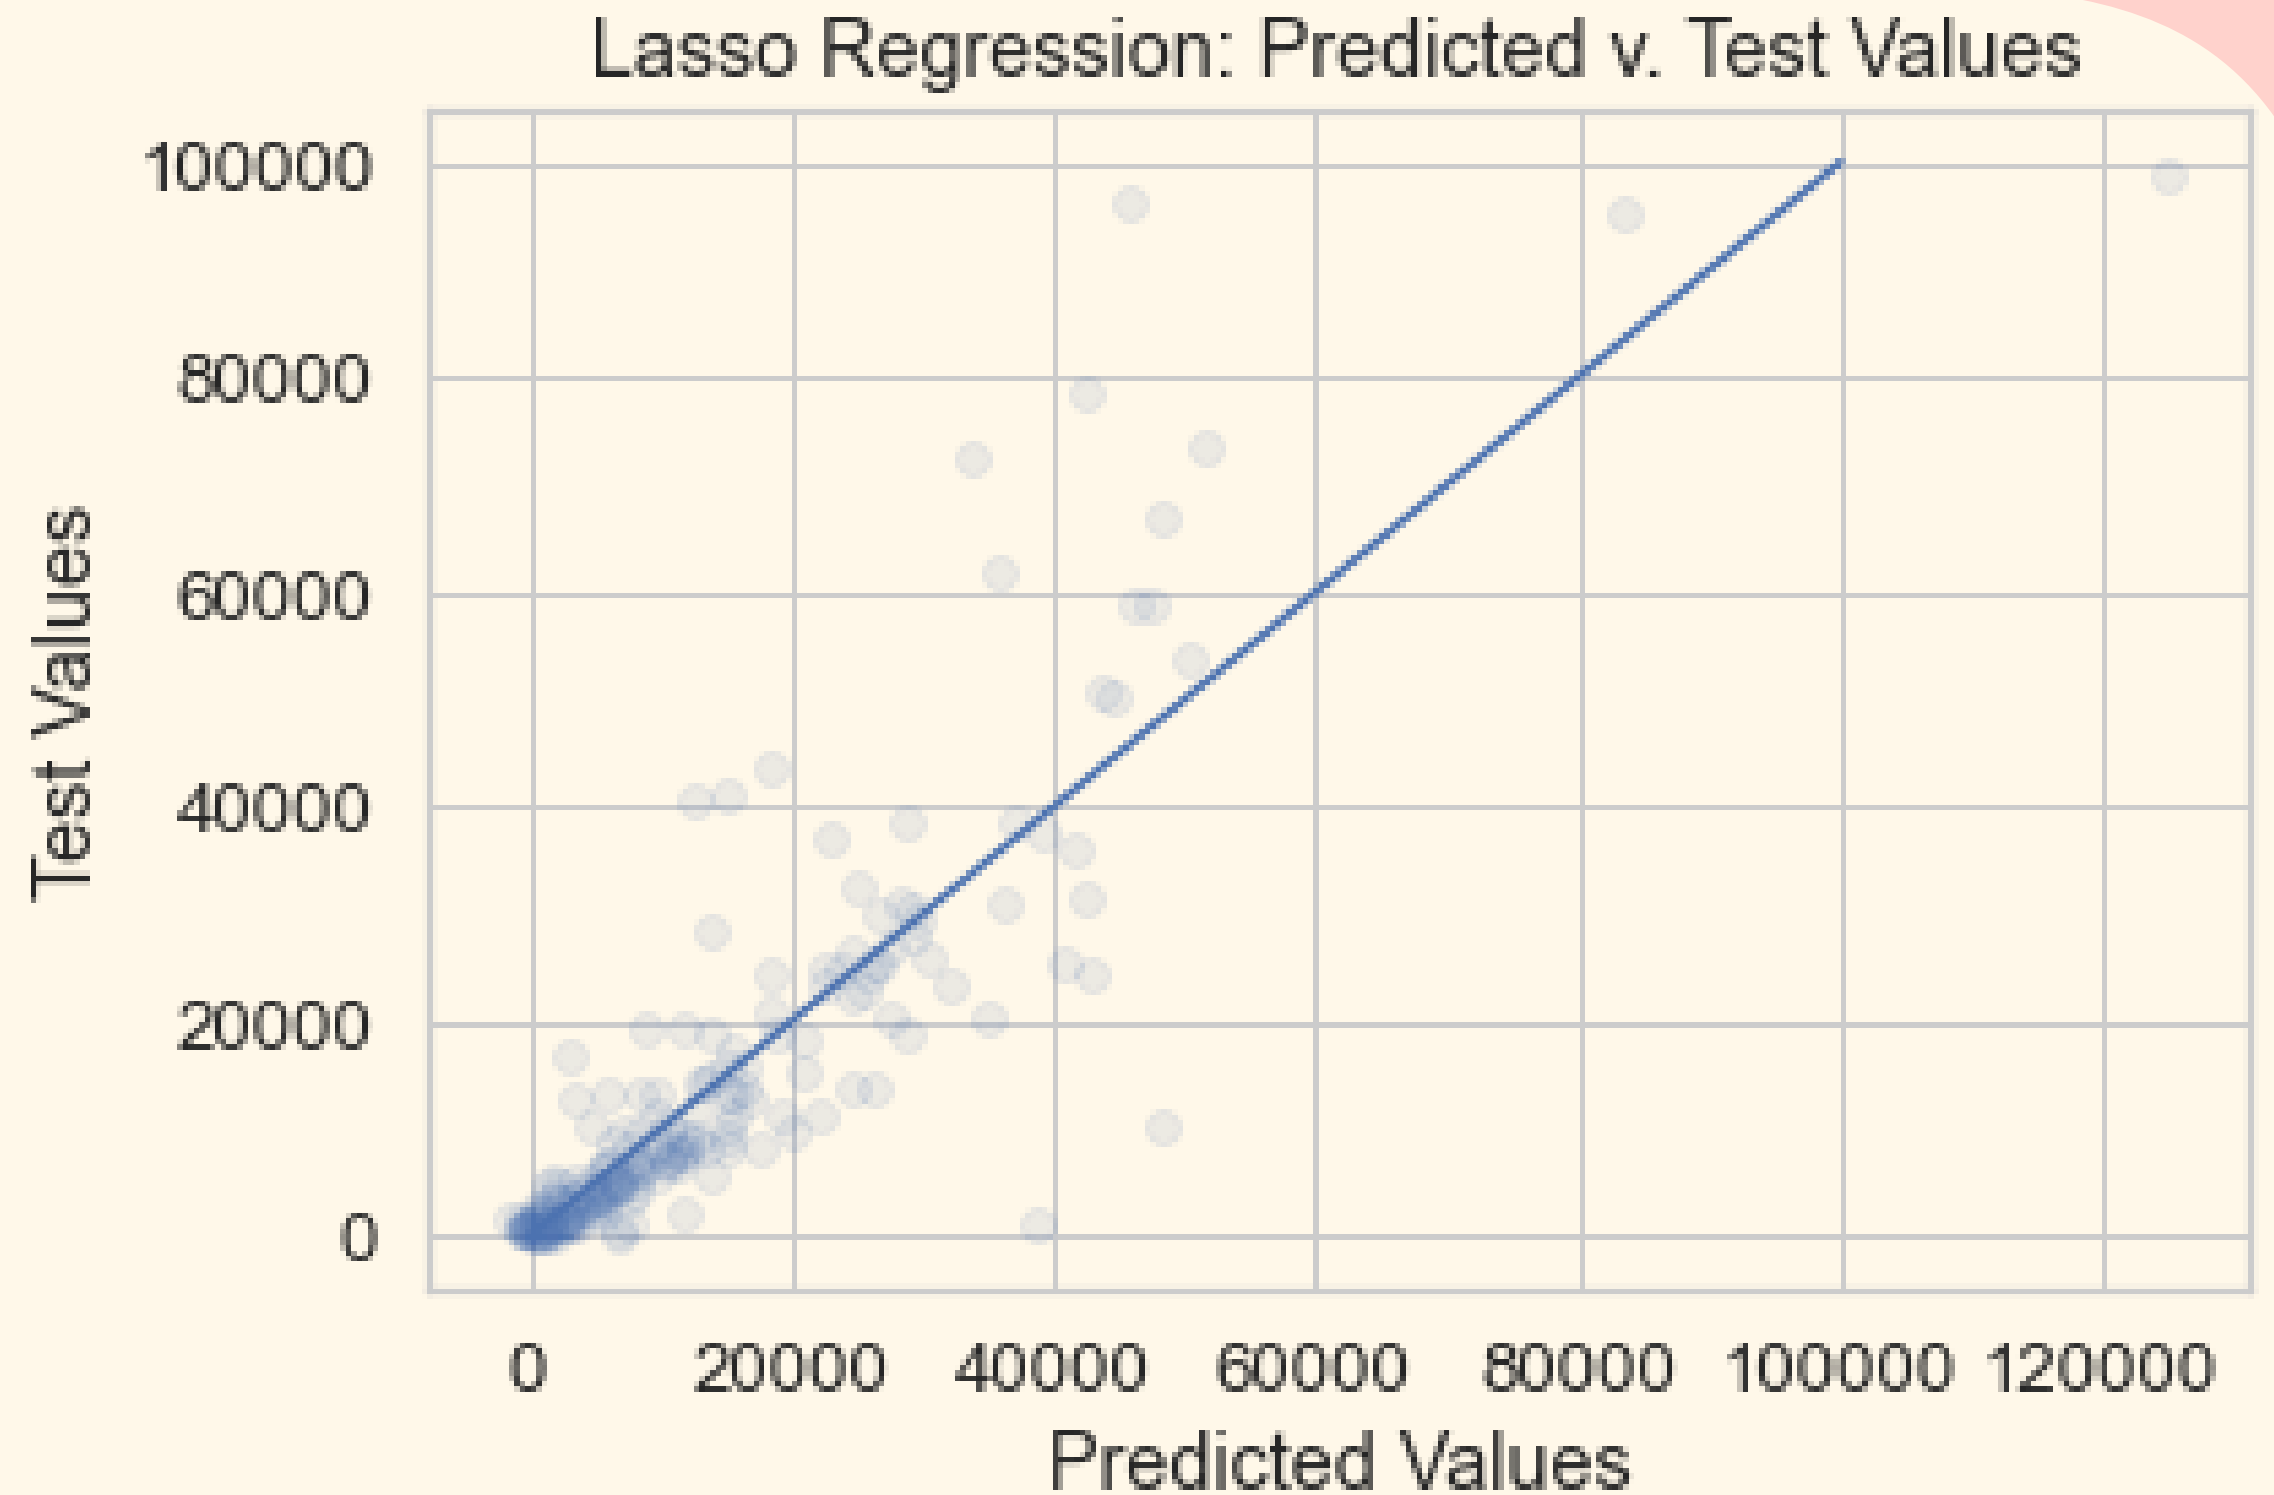

"Sculpture" "Art"
"Allentown, PA" "Northeast"

Reduced dataset by 68
points, removing rows with
Funding \geq \$100,000.

RESULTS

Predicted values using
standardized values with
funding under \$100,000

From the Lasso Regression
Model, the Mean Absolute
Error (MAE) = \$4,910

R^2 : 0.75

Most important features:

1. Number of Backers
2. Monetary Goal
3. Category: Technology

MODEL COEFFICIENTS

Highest Positively Correlated Coefficients:

1. Number of Backers, 11,543.39
2. Monetary Goal, 6,228.41
3. Technology, 915.93

Highest Negatively Correlated Coefficients:

1. Comics, -879.41
2. Number of Backers for Highest Pledge, -738.32
3. Journalism, -363.20

CONCLUSION

Limitations:

- Model can only infer from projects that received \$100,000 in funding or less.
- The dataset included only successful projects, leaving the gap in data for projects who did not reach their funding goal.

Interesting Finds:

- Project We Love Tag was insignificant based on lasso regression
- Number of backers for the highest pledge option had a negative correlation
- The only geographic area with a positive coefficient was the West

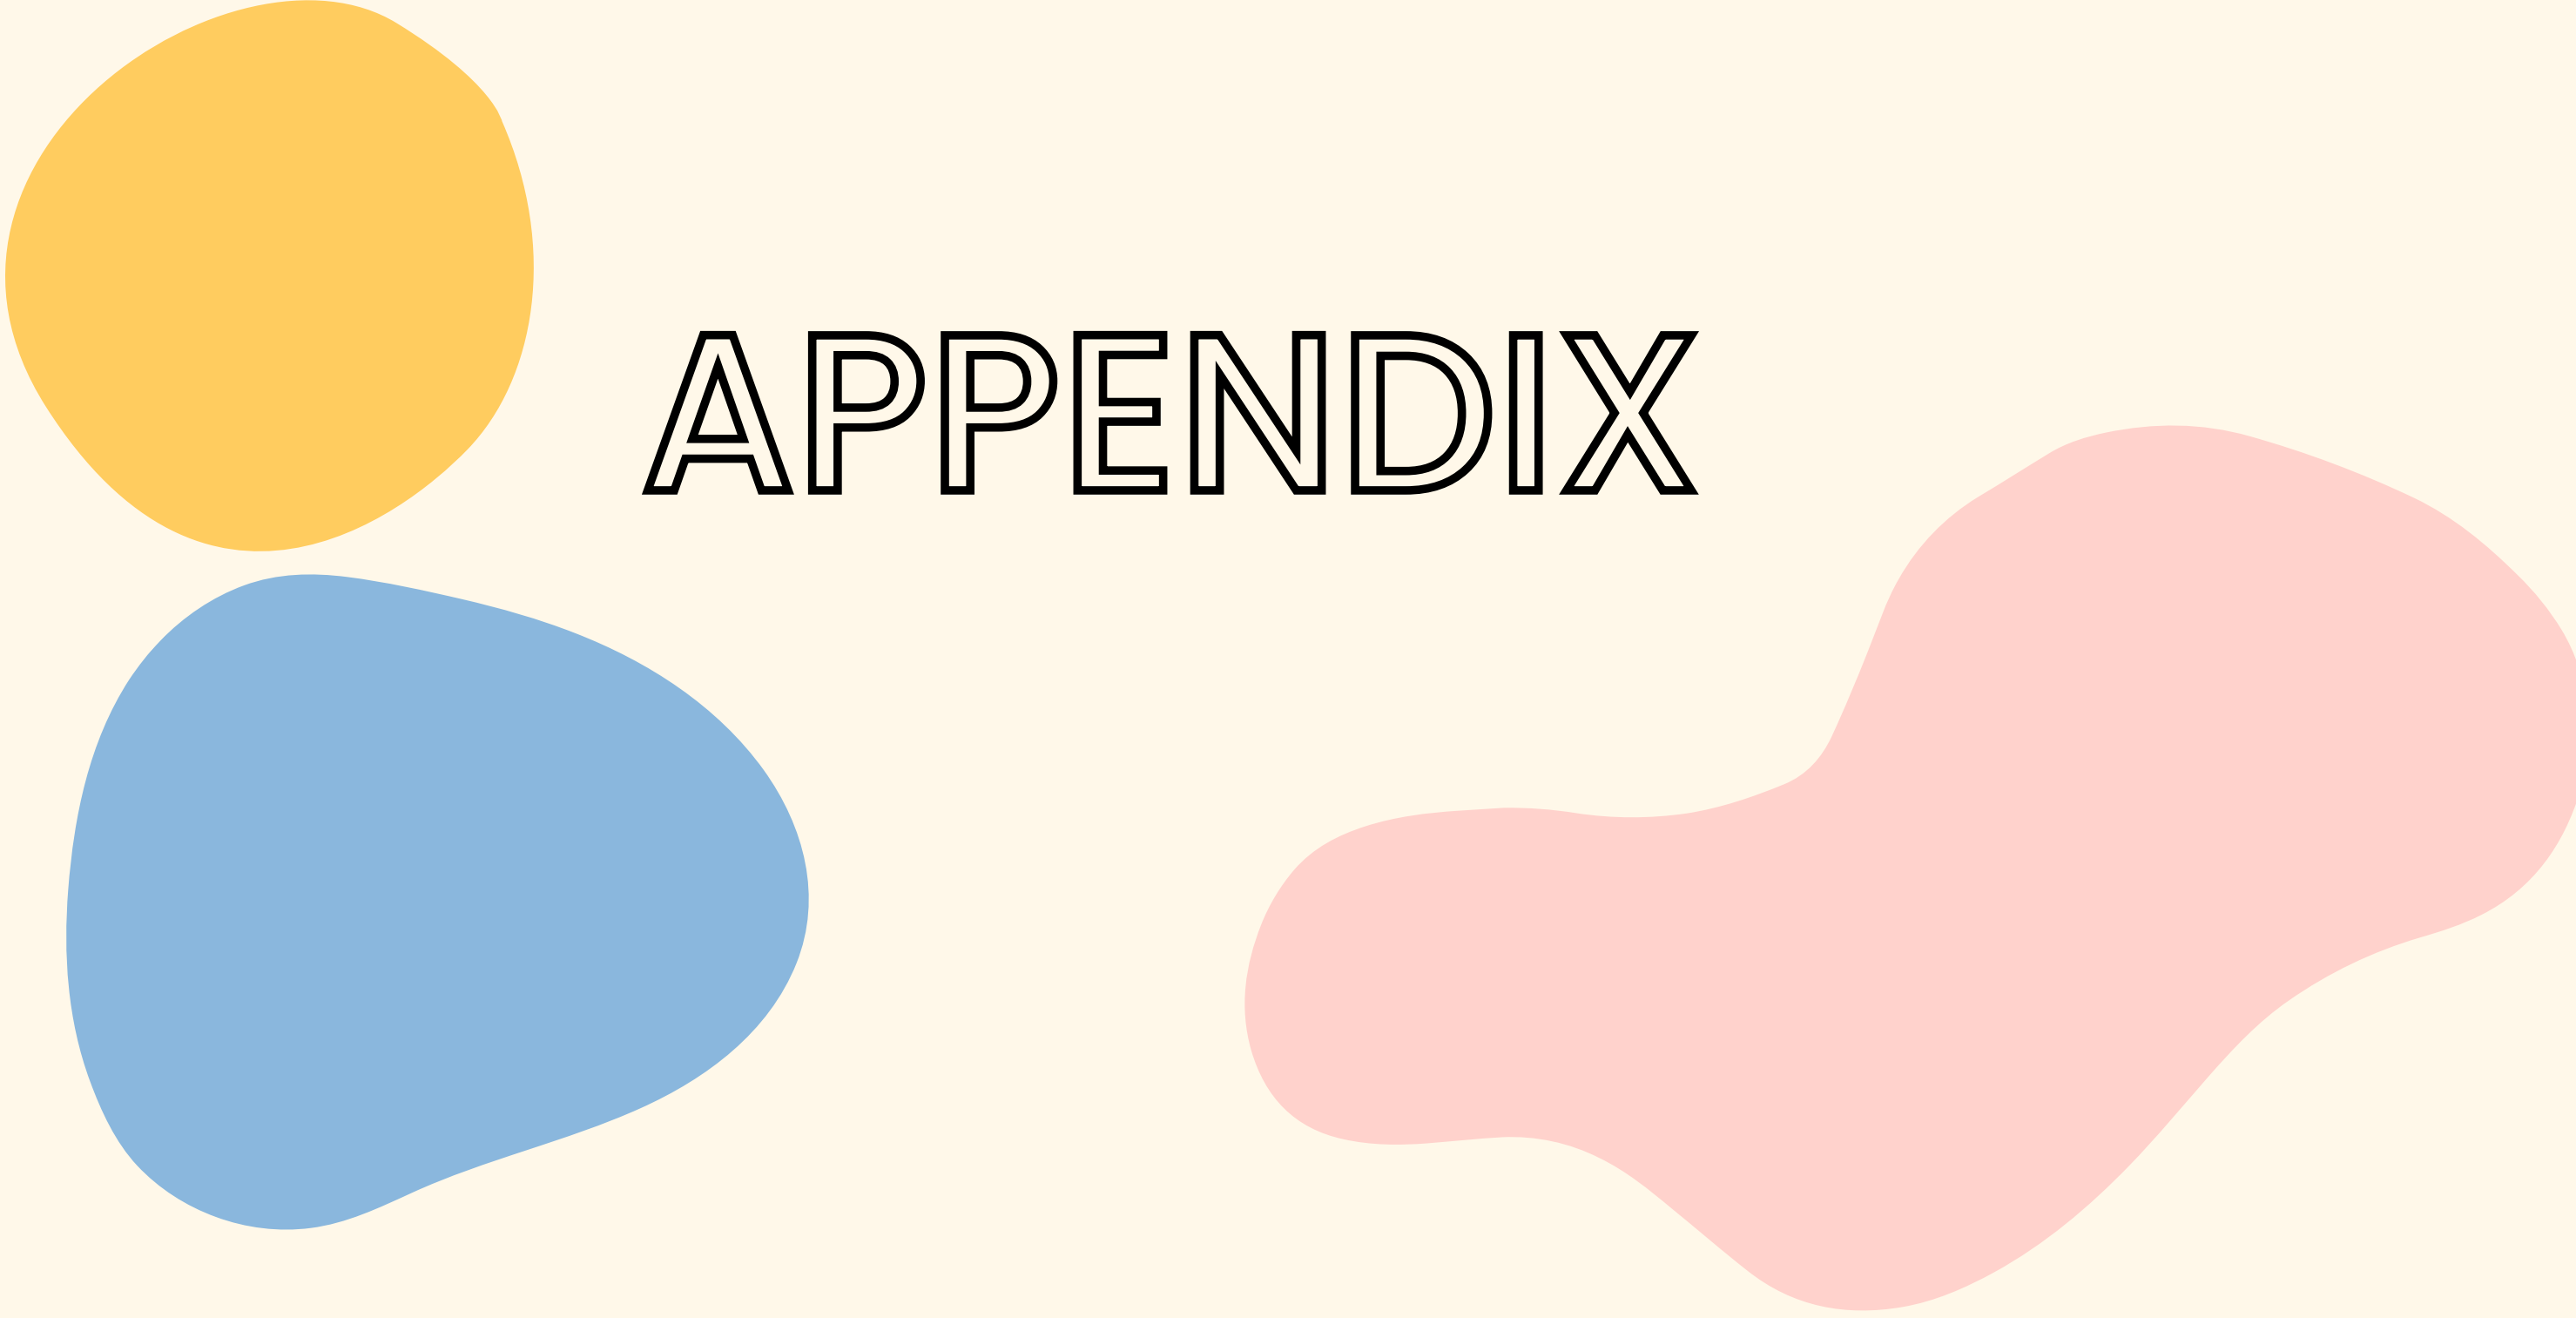

FUTURE WORK

Investigate polynomial
target-feature relationships

Acquire a larger dataset which
includes international project profiles

APPENDIX

Distribution of Funding <\$100,000
